HITACHI CHEMICAL DIAGNOSTICS

Research • Development • Manufacturing • Innovative Allergy Diagnostic Products

ABOUT HITACHI CHEMICAL DIAGNOSTICS (HCD)

Headquartered in the heart of Silicon Valley in Mountain View, California, and with offices around the world, HCD produces the MAST CLA Allergy Test. Hitachi Chemical Co., Ltd., acquired the company, formerly known as Mast Immunoseystems, Inc., in 1996 and formally changed the company name to Hitachi Chemical Diagnostics, Inc., in July of 2000.

HCD has a legacy of innovation. It was the first company to introduce a multiple diagnostic test for allergies. Improvements were made when the company introduced its chemiluminescent assay system for the detection of IgE antibodies. This strong heritage and the strength of the Hitachi brand have combined to build a strong distribution network in more than 40 countries worldwide.

Quality and Pioneer Spirit

When Hitachi Chemical acquired the company, it pledged to make HCD the leading global provider of allergy diagnostic products. The Hitachi Chemical philosophy directs HCD in everything it does, from research and development efforts, to the manufacture of products, and to its commitment to superior customer service. HCD continuously reviews its products and business actions in light of this responsibility.

Allergy Diagnostics Solutions

We see a broad future for in vitro allergy diagnostics. That's why we're

working with Hitachi Instruments to develop an automated system, continually expanding our product offering by developing new allergens such as Latex and Italian Cypress, and developing synergies with our sister companies by exploring technologies and expertise.

HCD proudly works with industry leaders to find solutions to health, safety and market expectations. At every level of our organization, we look for ways to take our commitment to medical diagnostics further for the benefit of our customers.

Put all these actions together and it becomes clear that HCD is committed to quality, innovation and becoming a global leader of allergy diagnostic products.
